

MULTI-MEDIA SYSTEMS

M-21
(2.0 cu ft)

M-11
(1.5 cu ft)

Mini
(0.9 cu ft)

The Multi-Media systems offer a wide range of capabilities. From cleaning surface grease and oil to stripping rust or paint, the M-Series can achieve any surface profile, while using either hard or soft abrasives. The control system allows you to precisely control the blast pressure as well as media flow rate with virtually any abrasive.

These units can be used with a wide range of media including sodium bicarbonate, aluminum oxide, plastic media, glass beads, crushed glass and even steel grit.

With a wide range of sizes available and the fact that it features trusted Schmidt valves and controls, the M-Series is a must for any project.

Differential Pressure Gauge w/ Panel and Full Port Bypass Options

Standard Features

- 150 psi vessel with 90° cone bottom
- Inlet filter
- Blast pressure regulator
- Water attachment for dust suppression
- Pneumatic vibrator for improved flow of lighter media
- TVII with slotted sleeve and clean out feature
- Newly designed media shut off valve for ease of use
- Internal valve (GSV) reduces media back flow into controls
- Lid and screen
